

Find High-Quality Health Care Options

Let Quality Care Finder ([medicare.gov/qualitycarefinder](https://www.medicare.gov/qualitycarefinder)) help you find high-quality health care options.

NOT ALL HEALTH CARE IS CREATED EQUAL. The providers and facilities you choose can impact your health. Finding the right expertise and care may help speed your recovery and improve your outcomes.

Medicare's Quality Care Finder has Medicare's Compare tools in one place. You can find doctors, hospitals, home health agencies, nursing homes, dialysis facilities, and health and drug plans. Then make "apples-to-apples" comparisons of their quality. Make well-informed decisions about the providers and facilities you trust with your health and your family's health.

HOSPITAL COMPARE: Compare Medicare-certified hospitals based on the quality of their care (for example, do they give the treatments known to get the best results for certain conditions, like heart attack and pneumonia?).

NURSING HOME COMPARE: Find Medicare-certified nursing homes based on the quality of care they give (for example, whether residents have gotten their flu shots or are in pain). You can also compare the star ratings based on the home's health inspections, staffing, and quality.

HOME HEALTH COMPARE: Find Medicare-certified home health agencies based on services like skilled nursing care, physical therapy, speech therapy and home health aides. Then, compare each home health agency based on the quality of their care (for example, how well they manage pain and treat wounds and keep patients safe).

MEDICARE PLAN FINDER: Get detailed, personalized information about the cost and benefits of available Medicare health and drug plans, and compare the quality of the services they provide.

DIALYSIS FACILITY COMPARE: Find Medicare-certified dialysis facilities and their services. Then, compare each facility based on quality of care (for example, whether patients had enough waste removed from their blood during dialysis treatments or if their anemia was controlled properly).

PHYSICIAN COMPARE: Find doctors, and other health care professionals, based on medical specialty, clinical training, foreign languages spoken, and more. You can also see if a doctor accepts the Medicare-approved amount as full payment.

YOU HAVE CHOICES IN WHO CARES FOR YOU

The quality of health care providers and facilities you choose can impact your health. Providers and facilities vary in how well they care for patients, the number of medical errors they make, and their experience with specific health conditions or procedures. Plans vary by cost, quality, and types of services they provide.
