Why Should I Compare Hospitals?

Many people check restaurant ratings or read consumer reviews before they make a choice. Shouldn't you also check the quality of the hospitals you rely on when you need medical care?

In an emergency, you should go to the nearest hospital. When you can plan ahead, you and your doctor should discuss which hospital will best meet your health care needs. The information on the **Hospital Compare** Web site can help you make an informed choice. Visit www.hospitalcompare.hhs.gov.

Surgical Care Improvement Project Standards of Care Measures

Hospitals can reduce the risk of wound infection after surgery by making sure patients get the right medicines at the right time on the day of their surgery. These measures show some of the standards of care. Read more information about how to prevent wound infection. Learn why Surgical Care Improvement Project Standards of Care Measures are Important.

What Kind of Information is on Hospital Compare?

Hospital Compare gives you a “snapshot” of the quality of the hospitals in your area and around the nation.

- How recently-discharged patients responded to a national survey about their hospital experience. For example, how well their hospital's doctors and nurses communicate with patients, and how well they manage their patients' pain.
- How often each hospital gives recommended treatments for certain common conditions, like heart attack, heart failure, pneumonia, children's asthma, and for surgical patients.
- How each hospital's rates of readmission and 30-day mortality (death) rates for certain conditions compare with the national rate.
- How a hospital uses outpatient medical imaging tests (like CT scans and MRIs).
- How many people with Medicare have had certain procedures or have been treated for certain conditions at each hospital.
- How much Medicare pays a hospital (on average) when the hospital performs certain procedures or treats certain conditions.
- Hospital Compare is adding information about patient safety and hospital-acquired conditions, like infections. Check Hospital Compare regularly for new information in support of the Value Based Purchasing program that will adjust payments to providers—like hospitals that give exceptional care or show improvement.
