CMS Product No. 11382
Revised July 2016

Electronic Prescribing eRx

Electronic prescribing can help you.

Electronic prescribing (sometimes called “eRx”), is an electronic way for doctors to write and send your prescriptions directly to your pharmacy. This means no more prescriptions on paper and less time waiting to have your prescription filled. Usually, all you need to do is go to your pharmacy and pick up the prescription. It’s that simple. Keep reading to learn about how electronic prescribing can save you time and money, and help to keep you safe.

Electronic prescribing can keep you safe

- Doctors have secure access to your prescription history, so they can prescribe drugs that won’t interact with other prescription drugs that you might be taking.
- Electronic prescriptions are easier for the pharmacist to read than handwritten prescriptions. This means there’s less chance you’ll accidentally get the wrong drug or dose.

Electronic prescribing can save time & money

- Doctors can check which drugs your insurance covers, so they can try to prescribe a covered drug that costs you less.
- You don’t have to drop off your prescription and wait for your pharmacist to fill it. In most cases, your prescription will be ready when you arrive.
- There are fewer phone calls and faxes between your doctor and your pharmacy. This means you’ll get your prescriptions sooner.
